

MATLAB PATH

startup.m

When MATLAB starts, it will look for a **pathdef.m** file in its startup directory.

Start up folder (in the MATLAB icon | Properties | Start in) (e.g. D:\Sources\MATLAB) allows controlling different paths and other settings via startup.m file placed in the folder, e.g.:

```
disp('Welcome to physiology analysis...');  
set_sources_path; % set additional paths dynamically, e.g.  
% addpath(genpath('D:\Sources\MATLAB'));  
  
cd('F:\Data');  
edit;  
EditorMacro('Alt-Control-h', @createHeaderComment_dag);  
  
dbstop if error
```
