

# NeuroElf Resources

## Online resources

<http://neuroelf.net/>

<http://neuroelf.net/wiki/doku.php>

<https://www.youtube.com/channel/UC1sM-zqnmdcZOrRf-i0FLGg> | NeuroElf youtube tutorials!

## Help

For getting detailed help on each method of xff object (e.g. fmr), use:

```
>> fmr.Help % to see all methods
>> fmr.Help('Method') % e.g. fmr.Help('Realign') to see details of each method
```

See <http://neuroelf.net/wiki/doku.php?id=obj.help>

## NeuroElf-based ERA

[http://neuroelf.net/wiki/doku.php?id=neuroelf\\_gui\\_-\\_mdm\\_voi\\_condition\\_average\\_ui](http://neuroelf.net/wiki/doku.php?id=neuroelf_gui_-_mdm_voi_condition_average_ui)

<http://neuroelf.net/wiki/doku.php?id=mdm.voicondaverage>

## DAG installation notes

1) During installation, disable (remove from path) Chronux (if present): conflict with linec.m

2) NeuroElf functions use std.m and var.m as in newer versions of MATLAB, with 3 inputs: e.g. Y = STD(X,FLAG,DIM). Therefore, NaN toolbox functions std.m and var.m are incompatible, remove it from path. Revise sterr.m and corrcoef\_eval.m and place to lgtools.

3) Starting from NeuroElf\_v09d, many useful auxiliary scripts/functions are “hidden” behind @neuroelf method, and reside in **..\@neuroelf\private**. They can be placed in the path (i.e. copied to the main NeuroElf folder, it is not possible to add to path this private folder directly), or accessed as described in [main installation folder] / README.html > Function library:

```
>> netools = neuroelf;
>> list_of_files = netools.findfiles(startfolder, pattern);
```

The functions below should be in the NeuroElf base (root) folder (e.g. D:\Sources\NeuroElf\_v10\_4503). **Only** this folder should be on the path!

4) There is a bug in NeuroElf v1.0 and v0.9d, to fix please replace the function dcm\_Value.m in /xff/private with the function below. This function is used by createfmr.m

#### dcm\_Value.m

```
function dcmval = dcm_Value(hfile, vkey, varargin)
% DCM::Value - return a tag's value
%
% FORMAT:      dcmval = dcm.Value(key [, ...]);
%
% Input fields:
%
%      key      DICOM key (0008.0010) or tag (PatientsName)
%      ...      default value if not found
%
% Output fields:
%
%      dcmval    value for given key/tag
%
% Using: makelabel, splittocell.
