

# Spike analysis pipeline overview

## Folder structure

```

^File                               ^Info
| Y:\Projects\project\ephys\version main folder contains:
||
| population_monkey_session.mat | spike data sorted by unit for each
session                           |
| sites_monkey_session.mat      | LFP data sorted by site for each session
|
| by_block_monkey_session.mat   | body signals sorted by block for each
session                           |
| Mon_sorted_neurons.xls       | copies of the used sorted neurons tables
from dropbox                      |
| keys_Monkey.mat              | copy of the keys used when running
ph_initiation                     |
| tuning_table_combined.mat    | Anova results stored in a table
|
| tuning_table_combined_CI.mat | Anova results restructured according to
contra/ipsi definitions         |
| tuning_table_combined.xls    | simplified excel table
|
| seed.mat                     | a saved seed to make randomizations
reproducible                     |
| Subfolders:
||
| spike_shapes                 | Spike shapes, firing rates over time,
and ISI plots                   |
| single_cell_examples          | Single cell plots
|
| cell_counts                   | Anova results as pie plots
|
| scatter                       | Anova results as scatter plots (one
column versus another)         |
| population_analysis           | population PSTHs
|
| response_timing               | tuning over time plots
|
| ...                          |
|
* \Dropbox\DAG\phys\Monkey_phys_dpz\Sorted_neurons excel table

```

## General Workflow

- ph\_initiation(project,{version1,version2,...})

1. loop per monkey
2. read in general settings → project settings → version settings
3. run ph\_session\_processing (core function)
  - read in data from Y:\Data\Monkey\_phys\_combined\_monkeypsych\_TDT
  - run monkeypsych\_analyze for saccade detection etc.
  - run ph\_run\_state\_alignment\_per\_trial
    1. takes over relevant trial and state (event) information
    2. combines it with Sorted Neuron table information
    3. !! Copies last 1 second of spikes to beginning of next trial
    4. !! Cuts and appends last 1 second of streams to beginning of next trial
    5. !! excludes trials without physiology data And/or NOT matching condition
  - resort data by unit/site/block
  - plot waveforms/ISI/FR\_across time per unit
  - exclude units dependent on excel entries (SNR/stability/single rating)
  - plot waveforms/ISI/FR\_across time per unit again for remaining units
  - run ANOVAs (ph\_ANOVAS)
  - create single cell plots (ph\_plot\_unit\_per\_condition)
  - save files per session
4. format tuning table (create tuning\_table\_combined\_Cl.mat and tuning\_table\_combined.xls)
5. ph\_get\_filelist for crossreferencing with behavior
6. ph\_initiate\_population\_analysis also runs population analysis

## Synchronization

- Very important: In additi

## Associated code

hmm
